

# 2025 Quality Management Review Summary

Loblolly Ridge Therapeutics | Quality Assurance | 2026-02-20

Summary of the 2025 quality management review, held in February 2026 and chaired by the CEO with the executive team. It records the 2025 inputs, the measures reviewed, the decisions taken and the quality objectives for 2026.

## Inputs reviewed

Partner and internal audits.

Quality events and CAPA.

Training.

Document control and the eQMS migration.

Partner quality and resources.

## 2025 measures

Quality events: 72 were opened in 2025, 6 of them major and none critical; 69 were closed by year end, with a median time to close of 39 days. By source: internal lab 23, vendor audit 17, document control 9, CDMO batch 9, CRO or site via the CRO 8, and supplier 6. Events are classified minor, major or critical; a CAPA is required for major and critical events and for repeated minor ones.

Audits: Quality Assurance completed 10 partner audits and one internal audit of document control. The partner audits produced 17 findings, each logged as a quality event.

Training: on-time completion of assigned training was 93%; most late items fell in November and December, when training records moved into the eQMS.

Documents: the eQMS went live on November 17, 2025. Periodic reviews were deferred during the August to November migration freeze, so a group of migrated documents will pass their review due dates in 2026.

## Decisions and 2026 objectives

The review set three quality objectives for 2026: clear the periodic-review backlog by June 30, 2026; complete the tier 1 audit program; and qualify a backup API supplier. The 2026 audit program covers tier 1 partners due for routine audit, for-cause audits and an internal audit of TMF oversight; upcoming routine audits include Alder Bioanalytical, Aster Archive Services and Northgate Pharma Services in the autumn.

## Resource needs

Document owner time in the first half of 2026 to clear the periodic-review backlog.

External auditor support for tier 1 audits outside the United States.

A GLP oversight deputy in QA.

Training-matrix mapping for contractors, with People.
