

LRT-2240 Non-Confidential Partnering Presentation

LRT-2240: an investigational oral small molecule for chemotherapy-induced peripheral neuropathy. Non-confidential overview for prospective partners, May 2026. LRT-2240 is not approved for any use.

The problem a partner would take on

Chemotherapy-induced peripheral neuropathy is a common and often dose-limiting side effect of several widely used chemotherapy classes. Treatment options are limited, and oncologists sometimes reduce or stop chemotherapy because of it. We are looking for a partner to take an oral option through later-stage development.

LRT-2240 at a glance

Investigational oral small molecule.

In-licensed from Tamsin Biosciences in 2019; Loblolly Ridge holds exclusive worldwide development and commercialization rights.

Study 2240-201, a Phase 2a study, completed its last participant visit in November 2025; the clinical study report is being finalized.

Clinical, nonclinical and CMC information is available under a confidentiality agreement.

Proposed development path

The proposed next step is a Phase 2b study. Its design is being drafted with input from our clinical and regulatory teams and will be shared with partners under a confidentiality agreement, together with the Phase 2a data and the CMC plan.

Partnership structures we would consider

A global license.

A regional license.

A co-development arrangement.

In each case Loblolly Ridge would keep an option to co-promote in the United States.

About Loblolly Ridge

Loblolly Ridge Therapeutics is a clinical-stage company in The Woodlands, Texas, developing oral small-molecule medicines for serious chronic cardiometabolic, renal and neuropathic-pain conditions. We combine in-house discovery biology, DMPK, clinical development, regulatory and quality teams with a qualified network of clinical, nonclinical and manufacturing partners.

Next conversation

If LRT-2240 fits your portfolio, we will put a confidentiality agreement in place and open the data room, followed by a scientific and clinical discussion with our team. Please contact Business Development at Loblolly Ridge Therapeutics.
