

**FY2026 R&D Budget,
Forecast and Accruals
Workbook**

Loblolly Ridge Therapeutics

Effective date	2026-09-15
Purpose	Monthly actuals, accruals and budget through August 2026, the FY reforecast by program and cost category, and supporting purchase-order detail.
Coverage	See each dataset dictionary and summary. Missing numeric values are excluded, not zero.
Summary interpretation	Descriptive statistics of selected records only. Totals of percentages and adjustment values are not operating KPIs.
Introduction	Working R&D budget file after the August 2026 close. Actuals and accruals run from January to August 2026; the full-year view uses the H2 reforecast the executive team approved on September 11, 2026. Prepared by the Controller for budget holders and the CFO.
Sheets	Data 1 – monthly R&D expense, budget, accrued and invoiced amounts by cost object and cost category, January to August 2026 (448 rows: 8 months, 8 cost objects, 7 categories).
Sheets	Data 2 – FY2026 approved budget, January–August actual, September–December reforecast and full-year forecast for all 56 cost object and category cells.
Sheets	Data 3 – research purchase-order lines raised January to August 2026.
Sheets	Summary – formula totals of each numeric column, recalculated on save.
Definitions	Actual expense includes accruals. Accrued is the part of a month's expense not yet invoiced at close; invoiced is the part matched to partner invoices. Monthly variance is actual minus budget; full-year variance is forecast minus budget, so a positive number is an overspend.
Definitions	Budgets are held by cost object (program, discovery, platform and lab, R&D support and quality, and the unallocated reserve) and by seven categories: clinical CRO and sites, clinical pass-through, nonclinical CRO, CMC and clinical supply, research services and consumables, allocated personnel, and consultants and other.
How the numbers are estimated	The close runs to working day 5: partner activity reports are due by working day 3, program owners confirm estimates by working day 4 and the Controller signs off on working day 5. CRO services accrue from activity reports and milestones, pass-through from CRO visit estimates, GLP studies by percentage of completion, CDMO work by batch stage, fixed-fee services straight-line and purchase orders on goods receipt.
How the numbers are estimated	Personnel cost is allocated to cost objects from quarterly FTE estimates, so personnel by program is an allocation rather than a tracked actual.
Headline figures	FY2026 R&D budget approved in December 2025: \$94.8 million, including a \$2.4 million unallocated reserve.
Headline figures	January to August actual: \$59.5 million against a phased budget of \$64.4 million, \$4.9 million under, mainly timing in nonclinical and CMC work.

Headline figures	September reforecast: \$95.07 million for the year, \$0.27 million over budget after releasing \$1.25 million of the reserve.
Headline figures	August close: \$1.9 million of August expense was accrued rather than invoiced, including 50% of clinical CRO and pass-through expense.
Headline figures	External services are 72% of the FY2026 budget, excluding the reserve.
Purchase-order lines	1,114 research purchase-order lines worth \$2.2 million were raised from January to August: 1,072 received, 31 open at August 31 and 11 cancelled. The sheet covers research procurement only; CRO, CDMO and testing-laboratory spend is committed through work orders and is not in it.
Not included	G&A budget detail, payroll detail, partner invoice images and the cash forecast.
