

Corporate Partnering Overview

Loblolly Ridge Therapeutics: corporate overview for partnering meetings, September 2026. Our product candidates are investigational and none is approved for any use.

Why we are meeting

We are looking for partners who can take one of our investigational programs further, in a region or globally, and for research collaborators in cardiometabolic biology. This overview introduces the company and the assets available for discussion.

Loblolly Ridge in brief

A privately held, clinical-stage company founded in 2012 and headquartered in The Woodlands, Texas, with 128 employees. We develop oral small-molecule medicines for serious chronic cardiometabolic, renal and neuropathic-pain conditions.

Portfolio

LRT-1107: Phase 3, treatment-resistant hypertension.

LRT-2240: Phase 2a completed, chemotherapy-induced peripheral neuropathy.

LRT-3318: licensed to Castellane Pharma, MASH.

LRT-4051: IND-enabling, diabetic kidney disease.

Discovery: cardiometabolic, renal and neuropathic pain.

All are investigational.

How we work

In-house discovery biology, DMPK, clinical development, regulatory and quality teams, working with a qualified network of clinical, nonclinical and manufacturing partners.

Available for partnership

LRT-2240: global or regional license, or co-development. We hold exclusive worldwide rights under a 2019 license from Tamsin Biosciences and would keep an option to co-promote in the United States.

LRT-1107: ex-U.S. rights.

Research collaborations around our cardiometabolic discovery work.

Next conversation

If an asset fits your portfolio, we will agree a confidentiality agreement and arrange a scientific discussion and data room access. Please speak to our Business Development team at this meeting.
