

Loblolly Ridge Therapeutics Company Overview

Loblolly Ridge Therapeutics | Business Development with Corporate Communications | 2026-07-15

Loblolly Ridge Therapeutics is a clinical-stage company in The Woodlands, Texas, developing oral small-molecule medicines for serious chronic cardiometabolic, renal and neuropathic-pain conditions. All of our product candidates are investigational and none is approved for any use.

What we do

We discover and develop oral small-molecule medicines. Our work runs from target validation and medicinal chemistry through clinical development and regulatory submissions. We have no marketed products and no commercial organization; our focus is on taking programs through development and working with partners where they can take a program further.

Portfolio at a glance

LRT-1107 – in Phase 3 for treatment-resistant hypertension.

LRT-2240 – has completed Phase 2a in chemotherapy-induced peripheral neuropathy.

LRT-3318 – licensed to Castellane Pharma for metabolic dysfunction-associated steatohepatitis (MASH).

LRT-4051 – in IND-enabling studies for diabetic kidney disease.

Discovery programs in cardiometabolic, renal and neuropathic-pain biology.

All are investigational.

How we work

We combine in-house discovery biology, DMPK, clinical development, regulatory and quality teams with a qualified network of clinical, nonclinical and manufacturing partners. Our teams design the science, own the development plans and oversee the partners who run studies and make clinical supplies.

Where we are

Loblolly Ridge Therapeutics, Inc. is a privately held Delaware corporation founded in 2012 and headquartered in The Woodlands, Texas, where our offices and research laboratory are located. We have about 125 employees.

Partnering interests

We are seeking partners for LRT-2240 (global or regional), for ex-U.S. rights to LRT-1107, and for research collaborations around our cardiometabolic discovery work.
