

Inspection observation register	
Mesa Lantern Energy LLC	
Effective date	2026-09-26
Purpose	Scheduled and ad hoc modeled observations for field equipment and pads.
Coverage	See each dataset dictionary and summary. Missing numeric values are excluded, not zero.
Summary interpretation	Descriptive statistics of selected records only. Totals of percentages and adjustment values are not operating KPIs.
Introduction	Scheduled and ad hoc modeled observations for field equipment and pads. This draft is prepared for assurance reviewers as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.
Purpose and immediate use	The data tab shows inspection date, due date, severity, state, and optional work-order reference. An observation may be open while related work proceeds. Verify asset instance and location before joining to maintenance.
Inspection-to-work path	Inspection Register holds scheduled and ad hoc checks of meters, tanks, compressors, and pads. An observation may open a linked work order, but the two records answer different questions: the inspection records what was seen and the work order records the response. Overdue observations stay open until a named owner verifies closure. A scheduled check without a finding need not create maintenance work.
Inspection closure measure	The closure rate divides observations closed by observations due in the reporting period. Items with future due dates are outside the denominator, even if entered during the period. An analyst should preserve open, closed, and not-applicable states separately and inspect linked work orders before explaining a change in the rate. The measure describes recorded closeout, not the absence of physical defects.
Record question for review	Sort a pad's observations by due date, then inspect state and any work-order link. An observation due after the reporting period should not count against that period's closure rate. An open item due earlier calls for owner follow-up.
Review action and handoff	For a closure measure, include only observations due in the stated period and retain not-applicable states separately. The workbook summary alone does not calculate a verified closure rate.

Dataset	Measure	Unit	Total	Mean	Records	Period start	Period end
Field Inspections	Row count	records				2026-01-01	2026-08-31
					950		

Dataset	Field	Definition	Unit	Type	Reference
Field Inspections	inspection_id	Unique inspection		id	
Field Inspections	asset_id	Asset class		entity_ref	asset
Field Inspections	asset_record_id	Asset instance key		category	
Field Inspections	location_id	Pad or facility		entity_ref	location
Field Inspections	inspection_date	Inspection date		date	
Field Inspections	due_date	Observation due date		date	
Field Inspections	status	Observation state		category	
Field Inspections	severity	Observed severity		category	
Field Inspections	work_order_id	Related work order		category
