

# Issued extract coverage statement

Mesa Lantern Energy LLC | Production Accounting | 2026-09-26

This statement accompanies the selected operational extracts and is intended to remain with copies of the files. This draft is prepared for all handoff recipients as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.

## Purpose and immediate use

The data window ends August 31, 2026, and production covers selected well-days rather than the complete well population. Work and inspection files represent modeled records in their own registers. Missing meter or downtime values remain null. The start and end of a file do not establish that every day, well, asset, or vendor appears within it.

## Coverage and missing values

The proposed extracts end on August 31, 2026. Production rows represent selected well-days, about 32 of 118 modeled wells per day on average, so their sums are not companywide production totals. Some meter or downtime values may be null, with a reason where available. A missing value is excluded from a numeric calculation and must never be silently treated as zero.

## What the client extract can show

The proposed files are selective extracts from modeled operational registers through August 31, 2026. Reporting Mart can bring those copies together without changing a source system. The package can explain definitions, ownership, and recorded activity within that window. It cannot establish complete history, unrecorded field conditions, or companywide production from a selected well-day sample.

## Production stream definitions

The modeled field ledger holds oil, including lease condensate, in stock tank barrels and raw gas in thousand cubic feet at its measurement point. The internal barrel-of-oil-equivalent view uses six Mcf of gas for one boe. That ratio is a reporting conversion only; it does not make gas and oil economically or energetically identical. Processed natural gas liquids are not attributed to individual wells in this extract.

## Null and exception treatment

A blank numeric field is not evidence of no activity. Proposed extracts can contain missing meter readings or downtime values, with a reason where one was recorded. Keep nulls visible in row review and exclude them from numeric aggregation. If an analyst needs to replace a missing value, the replacement must travel through the source owner's correction process rather than through an unexplained spreadsheet edit.

## Record question for review

A production chart built from selected well-days can rise when more wells enter the sample. Place the contributing well-day count beside the chart and state that the line is a property of the extract. A companywide production conclusion would require another source or an agreed coverage method.

## Review action and handoff

Use the extracts for process tracing, schema review, and bounded descriptive summaries. Do not label sample totals as companywide. Before any broader comparison, request a coverage register or an agreed weighting method and check whether corrections after the extraction date are included.

## Companion extract summary

The accompanying summary is calculated from the selected records in this extract. Read its period, contributing-record count, and units before comparing values. It does not substitute for the record-level definitions and coverage limitations described above.

|         |                          |
|---------|--------------------------|
| Measure | oil_bbl                  |
| Unit    | bbl                      |
| Total   | 1897172.35               |
| Mean    | 251.148                  |
| Records | 7554                     |
| Period  | 2026-01-01 to 2026-08-31 |

|         |                          |
|---------|--------------------------|
| Measure | raw_gas_mcf              |
| Unit    | Mcf                      |
| Total   | 11407916.6               |
| Mean    | 1506.9903                |
| Records | 7570                     |
| Period  | 2026-01-01 to 2026-08-31 |
