

Maintenance work-order register

Mesa Lantern Energy LLC

Effective date	2026-09-26
Purpose	Selected asset work orders with priority, state, dates, and verified downtime.
Coverage	See each dataset dictionary and summary. Missing numeric values are excluded, not zero.
Summary interpretation	Descriptive statistics of selected records only. Totals of percentages and adjustment values are not operating KPIs.
Introduction	Selected asset work orders with priority, state, dates, and verified downtime. This draft is prepared for district planners as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.
Purpose and immediate use	Filter the data by asset instance, location, status, and due date. Closed date and downtime can be blank for legitimate reasons. A work order still in progress should not be treated as complete because its planned due date has passed.
Work-order route	A field request is tied to an asset and location. The integrity lead prioritizes it, and a supervisor confirms isolation and contractor readiness where needed. Completion is not inferred from a planned date: closeout requires a completion date, downtime record, and verifier. That sequence supports a distinction between an open request, work in progress, and a verified closed order.
Maintenance measures	Backlog is the count of open work orders at period end. An overdue order has a due date before that point and is not cancelled. Verified downtime hours are summed only where recorded; a blank duration is unknown rather than zero. Those definitions prevent an early extract from making the outstanding workload or the cost of disruption look smaller than the underlying records allow.
Record question for review	Filter an asset instance with more than one order. A new request can be open while an older request is closed, and their downtime fields may differ. A one-row-per-asset assumption would lose that sequence and misstate backlog.
Review action and handoff	The summary tab totals recorded numeric values; use the stated backlog and overdue definitions for period-end measures. An open queue needs a period-end state, not merely a count of rows.

Dataset	Measure	Unit	Total	Mean	Records	Period start	Period end
Maintenance Work Orders	downtime_hours	hours		158,229.36	121.53	2026-01-01	2026-08-31
						1302	

Dataset	Field	Definition	Unit	Type	Reference
Maintenance Work Orders	work_order_id	Unique work order		id	
Maintenance Work Orders	asset_id	Asset class		entity_ref	asset
Maintenance Work Orders	asset_record_id	Asset instance key		category	
Maintenance Work Orders	location_id	Operating location		entity_ref	location
Maintenance Work Orders	opened_date	Open date		date	
Maintenance Work Orders	due_date	Due date		date	
Maintenance Work Orders	closed_date	Verified close date		date	
Maintenance Work Orders	priority	Planning priority		category	
Maintenance Work Orders	status	Work status		category	
Maintenance Work Orders	downtime_hours	Verified production downtime hours		number	
Maintenance Work Orders	vendor_id	Synthetic vendor key		category
