

Issued contractor control note

Mesa Lantern Energy LLC | Supply and Contracts | 2026-09-26

This note identifies the distinct records needed to review a contractor charge in the pilot. This draft is prepared for finance reviewers as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.

Purpose and immediate use

The mobilization states vendor, scope, location, work dates, release state, and invoice reference. The field supervisor confirms service performed; Supply and Contracts matches the invoice. A missing work-order link may be legitimate for a service not initiated by maintenance, but its purpose should still be clear. Amounts in the selected extract are not a complete vendor ledger.

Contractor and invoice path

Supply and Contracts records approved vendors, scope, location, mobilization dates, and invoice references. Before a mobilization is released, the field supervisor records a job safety analysis reference and readiness confirmation. After service, the supervisor confirms work performed; Supply and Contracts then matches the invoice. This modeled path keeps site release, service evidence, and payment review as separate decisions.

Record linkage

Synthetic well, asset, location, vendor, work-order, and project keys connect the proposed datasets. Business users should see natural asset and project names where possible, while the keys preserve joins across extracts. A linked inspection and work order should refer to the same asset instance and location. A record without a valid link should be flagged for review rather than attached to the nearest plausible item.

System roles and handoffs

Field Log and Meter Historian feed the reviewed Production Ledger. Inspection Register and Work Register exchange references when a finding leads to maintenance. Vendor Ledger carries contractor transactions. Reporting Mart receives read-only exports for monthly summaries; it does not write changes back to operational systems. Source entries and timestamped revisions remain in those systems, which is why a report should name its extraction date.

Coverage and missing values

The proposed extracts end on August 31, 2026. Production rows represent selected well-days, about 32 of 118 modeled wells per day on average, so their sums are not companywide production totals. Some meter or downtime values may be null, with a reason where available. A missing value is excluded from a numeric calculation and must never be silently treated as zero.

Record question for review

If a contractor invoice amount is populated but the end date is blank, ask whether the visit is still underway or whether the record is incomplete. Do not infer total spend or completion from that amount. Match the specific scope and field confirmation before describing the charge as reviewed.

Review action and handoff

A reviewer should keep a questioned invoice open with its missing evidence named. Do not use the proposed or released state as proof of field completion. The note also explains why a price variance cannot be attributed to the field team until scope, period, and vendor identity agree.
