

Asset instance register
snapshot

Mesa Lantern Energy LLC

Effective date	2026-09-26
Purpose	A point-in-time listing of modeled wells, meters, tanks, compressors, and vehicles.
Coverage	See each dataset dictionary and summary. Missing numeric values are excluded, not zero.
Summary interpretation	Descriptive statistics of selected records only. Totals of percentages and adjustment values are not operating KPIs.
Introduction	A point-in-time listing of modeled wells, meters, tanks, compressors, and vehicles. This draft is prepared for operations analysts as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.
Purpose and immediate use	Use the unique asset-instance key for joins to work and inspection rows. The asset class and subtype describe equipment, while location identifies the modeled site. A retired item may still be referenced by a historical work order.
Operating boundary	Mesa Lantern Energy is modeled as a private onshore operator with two districts: High Plains in western Oklahoma and Red Mesa in the Texas Panhandle. Four named pads stand for the field footprint in this pilot. The 118 producing wells, roughly 16,400 boe per day, and 74 employees describe the modeled business at the reference date; they are planning context, not measurements from the supplied extracts.
Record linkage	Synthetic well, asset, location, vendor, work-order, and project keys connect the proposed datasets. Business users should see natural asset and project names where possible, while the keys preserve joins across extracts. A linked inspection and work order should refer to the same asset instance and location. A record without a valid link should be flagged for review rather than attached to the nearest plausible item.
Record question for review	An inspection row should match an instance key in this snapshot or be flagged for historical review. Matching only the equipment class, such as compressor, could attach a finding to the wrong machine. Status and location provide further checks.
Review action and handoff	This is an August 31 snapshot, not a complete acquisition or retirement history. Verify status before using it as a current asset count.
