

Selected well-day production extract Mesa Lantern Energy LLC	
Effective date	2026-09-26
Purpose	A selected sample of reviewed daily well records through August 31, 2026.
Coverage	See each dataset dictionary and summary. Missing numeric values are excluded, not zero.
Summary interpretation	Descriptive statistics of selected records only. Totals of percentages and adjustment values are not operating KPIs.
Introduction	A selected sample of reviewed daily well records through August 31, 2026. This draft is prepared for operations analysts as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.
Purpose and immediate use	Use the data tab to inspect well, pad, production date, oil barrels, raw gas Mcf, status, and meter reference. The summary tab describes the included rows only. Keep the production date and row status with every calculation; a null value is missing and cannot be read as a zero-volume day.
Production stream definitions	The modeled field ledger holds oil, including lease condensate, in stock tank barrels and raw gas in thousand cubic feet at its measurement point. The internal barrel-of-oil-equivalent view uses six Mcf of gas for one boe. That ratio is a reporting conversion only; it does not make gas and oil economically or energetically identical. Processed natural gas liquids are not attributed to individual wells in this extract.
Coverage and missing values	The proposed extracts end on August 31, 2026. Production rows represent selected well-days, about 32 of 118 modeled wells per day on average, so their sums are not companywide production totals. Some meter or downtime values may be null, with a reason where available. A missing value is excluded from a numeric calculation and must never be silently treated as zero.
Record question for review	Try filtering to one well and month before using the Summary tab. Check whether all expected days appear and whether any value is estimated or under review. A smooth-looking total across the whole sheet can conceal missing days or a changed sample composition.
Review action and handoff	The file is suitable for row tracing and schema review. It is not a complete operated-well population or a companywide production series. Ask for a coverage register before calculating an operator total.

Dataset	Measure	Unit	Total	Mean	Records	Period start	Period end
