

Service Lines at Tallowbrook Health

Tallowbrook Health | Strategy & Communications | 2026-07-01

This guide helps referring physicians, community partners and patients find the right Tallowbrook service and location. Each entry explains what is offered, where, and how to arrange care. Services are organized into seven service lines that work across our two hospitals and four outpatient facilities in west Houston and Fort Bend County.

Finding the right care

For emergencies, go to the nearest emergency department or call 911. Both Tallowbrook hospitals have 24-hour emergency departments.

For scheduled imaging, infusion and therapy, one central scheduling team books appointments at the Outpatient Pavilion West, Imaging & Therapy Stafford and hospital outpatient imaging. Surgery Center Grand Parkway cases are scheduled through the surgeon's office with the center directly.

Emergency and hospital medicine

Medical Center West has a 38-space emergency department with Level IV trauma designation; Hospital Fort Bend has a 24-space emergency department. Hospitalists care for admitted adult patients at both hospitals.

Patients with major trauma are taken to or transferred to regional Level I and II trauma centers. Emergency psychiatric consultation is available through our tele-psychiatry partner; patients who need inpatient behavioral health care are transferred to area specialty hospitals.

Surgery and orthopedics

Surgery is available at three sites: Medical Center West (10 operating rooms), Hospital Fort Bend (6 operating rooms) and the Surgery Center Grand Parkway (4 operating rooms and 2 procedure rooms). Services include orthopedics and spine, general surgery, gynecologic surgery, urology and ear, nose and throat surgery.

Heart and vascular

Cardiac catheterization is performed in two labs at Medical Center West. Hospital Fort Bend offers diagnostic cardiology and transfers patients with a STEMI heart attack to Medical Center West under an established protocol.

Women's and infant services

Labor and delivery, Mother-Baby care and a 10-bassinet Level II NICU are located at Medical Center West. Hospital Fort Bend does not provide obstetric care and refers expectant mothers to Medical Center West. Screening mammography is offered at the Pavilion and Stafford through Imaging & Diagnostics.

Imaging and diagnostics

Outpatient imaging is available at the Outpatient Pavilion West (MRI, CT, ultrasound, mammography and X-ray) and Imaging & Therapy Stafford (MRI, CT, ultrasound, mammography and DEXA). Both hospitals provide imaging for emergency and inpatient care. Lab draw stations are located at the Pavilion and Mission Bend.

Rehabilitation and therapy

Physical and occupational therapists see inpatients at both hospitals. Outpatient physical and occupational therapy is offered at the Pavilion, and outpatient physical therapy at Stafford.

Primary and urgent care

Urgent & Family Care Mission Bend offers walk-in urgent care from 8 a.m. to 10 p.m. every day, primary care appointments with six providers, X-ray and lab draw.

Scheduling and referrals

Referring offices can send imaging, infusion and therapy orders to central scheduling, which contacts the patient to book. Patients receive automated reminders 72 and 24 hours before their visit, and schedulers call imaging patients who need preparation instructions.

Emergency care: no appointment needed at either hospital.

Surgery: scheduled by the surgeon's office with the chosen surgical site.

Imaging, infusion and outpatient therapy: central scheduling.

Primary care at Mission Bend: call the clinic or walk in for urgent care.
