

Community Health Implementation Summary, FY2026–FY2028

Tallowbrook Health | Community Health | 2025-11-30

A summary for community partners and the public, November 2025. Prepared by Tallowbrook Community Health. It describes the health needs Tallowbrook will address over the next three fiscal years and how progress will be reported.

About Tallowbrook Health

Tallowbrook Health (Tallowbrook Community Health System) is a Texas nonprofit, tax-exempt regional health system based in west Houston. It operates two community hospitals, Medical Center West in Harris County and Hospital Fort Bend in Richmond, and four outpatient facilities in Harris and Fort Bend counties: Outpatient Pavilion West, Surgery Center Grand Parkway, Imaging & Therapy Stafford and Urgent & Family Care Mission Bend.

Why we assess community needs

Federal tax rules require nonprofit hospitals to conduct a community health needs assessment (CHNA) every three years and adopt a strategy to address the needs identified. Tallowbrook's board adopted its 2025 CHNA in June 2025 and this implementation strategy in November 2025.

Priorities for FY2026 to FY2028

The assessment drew on public health data for Harris and Fort Bend counties, community surveys and discussions with local organizations. Tallowbrook will focus on three priorities:

Access to primary care, especially for residents without a regular source of care.

Chronic disease management, with an emphasis on diabetes.

Maternal health, including prenatal care and support after delivery.

Programs

ED navigation: patients seen in Tallowbrook emergency departments who have no regular provider are offered help to establish primary care.

Transportation vouchers for residents who would otherwise miss primary care, prenatal or diabetes education visits.

Diabetes education classes at Urgent & Family Care Mission Bend, which also offers primary care with six providers, urgent care from 8 a.m. to 10 p.m. daily, X-ray and a lab draw station.

Prenatal education and postpartum follow-up calls through Women's & Infant Services at Medical Center West.

How we will measure progress

Tallowbrook will report each year on aggregate program measures, not on individual patients:

Number of ED navigation referrals and the share that result in a completed primary care visit.

Transportation vouchers issued and visits completed.

Diabetes education class sessions and participants.

Postpartum follow-up calls completed.

Needs not directly addressed

The assessment also identified housing, behavioral health services and food access. Tallowbrook is not the lead organization for these needs and will support partners through referrals and participation in county coalitions rather than through its own programs.

Contact

Questions and comments on the CHNA or this strategy are welcome and will be considered in the next assessment. Contact Tallowbrook Community Health through the system office in west Houston.
