

2026-2028 Resiliency Plan: Progress Update for Communities

Sedgewater Energy Holdings | Corporate Communications with Resiliency Program Office |
2026-09-21

Sedgewater is making its electric system in the Coastal Plain stronger against storms, heat and flooding. This update explains the 2026-2028 Resiliency Plan, what we are doing in your district this year and what we have finished so far.

What the plan is

The Public Utility Commission of Texas approved our 2026-2028 Resiliency Plan on October 23, 2025. It includes nine measures and about \$612 million of investment over three years. Texas law allows resiliency plans to use hardening, modernization, undergrounding, vegetation management and other measures over at least three years.

Why it matters

On May 19, 2026 a line of severe thunderstorms with straight-line winds crossed our service area, with the heaviest damage in Bayou and Prairie, and a second band of storms followed on the night of May 20. Bayou's tree canopy and flood exposure, and Prairie's long rural lines, make those districts the focus of much of the plan.

What we are doing in 2026

Replacing and bracing poles on Bayou and Prairie lines; adding automatic switching on lines that serve hospitals, water plants and other critical facilities; building flood walls at two substations; and trimming trees faster on high-risk lines, moving those lines to a three-year trimming cycle.

Progress so far

By the end of August 2026:

About 3,000 poles replaced or braced.

About 190 extra miles of tree trimming.

More than 110 automatic switching devices installed.

8 miles of line moved underground.

14 new weather stations in service.

Flood walls under construction at two substations.

The nine measures

Pole replacement and bracing; faster vegetation trimming; feeder automation; strategic undergrounding; substation flood mitigation; underground cable replacement; transmission structure hardening; weather stations and damage modeling; and substation physical security.

Our service area

Sedgewater serves the Coastal Plain service area in four districts: Harbor, Crossroads, Bayou and Prairie. We deliver electricity for the retail electric providers our customers choose; outages and hazards should be reported to Sedgewater.
