

Customer Contact Volumes,
January 2025 - August 2026

Sedgewater Energy Holdings

Effective date	2026-09-10
Purpose	Monthly contacts by business and reason with handled, self-service, abandoned and minutes.
Coverage	See each dataset dictionary and summary. Missing numeric values are excluded, not zero.
Summary interpretation	Descriptive statistics of selected records only. Totals of percentages and adjustment values are not operating KPIs.
Introduction	Workbook of monthly customer contact volumes from January 2025 to August 2026 for the electric and gas businesses, by contact reason. Prepared by Customer Contact from the contact center platform. Counts are aggregate; no customer records are included.
Sheets	Data 1 - contacts offered, handled by agents, completed in self-service and abandoned, with total handle and wait minutes, by month, business and reason.
Sheets	Summary - formula totals of each numeric column.
Definitions	Contacts offered equals contacts handled by agents plus contacts completed in self-service (text, web or automated phone) plus calls abandoned in the queue. Average speed of answer is wait minutes divided by contacts handled. Electric contacts cover outages, hazards, meter access, streetlights and service-order questions; electricity billing questions go to the customer's REP. Gas contacts include billing, payments, start and stop, odor calls and pilot relights.
2025	586,919 electric and 841,105 gas contacts. Average speed of answer was 62 seconds for electric and 54 seconds for gas; 3.7% of queued calls were abandoned.
2026 to August	Electric 562,022 and gas 555,713 contacts; 53% were completed in self-service channels. In May 2026 electric contacts reached 205,440 (April 49,645), electric average speed of answer was 175 seconds for the month and 12.1% of queued electric calls were abandoned. Outage reports made up 161,557 of the May electric contacts, 78% of them completed without an agent.
Targets and model	Targets: average speed of answer of 60 seconds or less in normal operations and under three minutes during storm activation; abandonment below 5%. One contact center at the Houston operations center handles both businesses, with an overflow partner for storms and billing peaks.
Data notes	Electric self-service is blank for January and February 2025 because text outage reporting was added to the statistics in March 2025; contacts offered for those months exclude self-service. In January 2026 the 'REP or service-order inquiry' reason was redefined to include REP calls about meter reads.
