

Reliability Council: Worst-Feeder Review, August 2026

Reliability Council, September 16, 2026. Worst-feeder review with January-August 2026 results. Presented by Reliability Engineering.

Year to date: on track

January-August 2026 SAIDI excluding major events: 84.0 minutes (83.3 same period 2025). SAIFI 0.830 (0.850). Full-year standards are 124 minutes and 1.28.

By district

SAIDI / SAIFI, January-August 2026:

Harbor 71.3 / 0.713

Crossroads 63.4 / 0.724

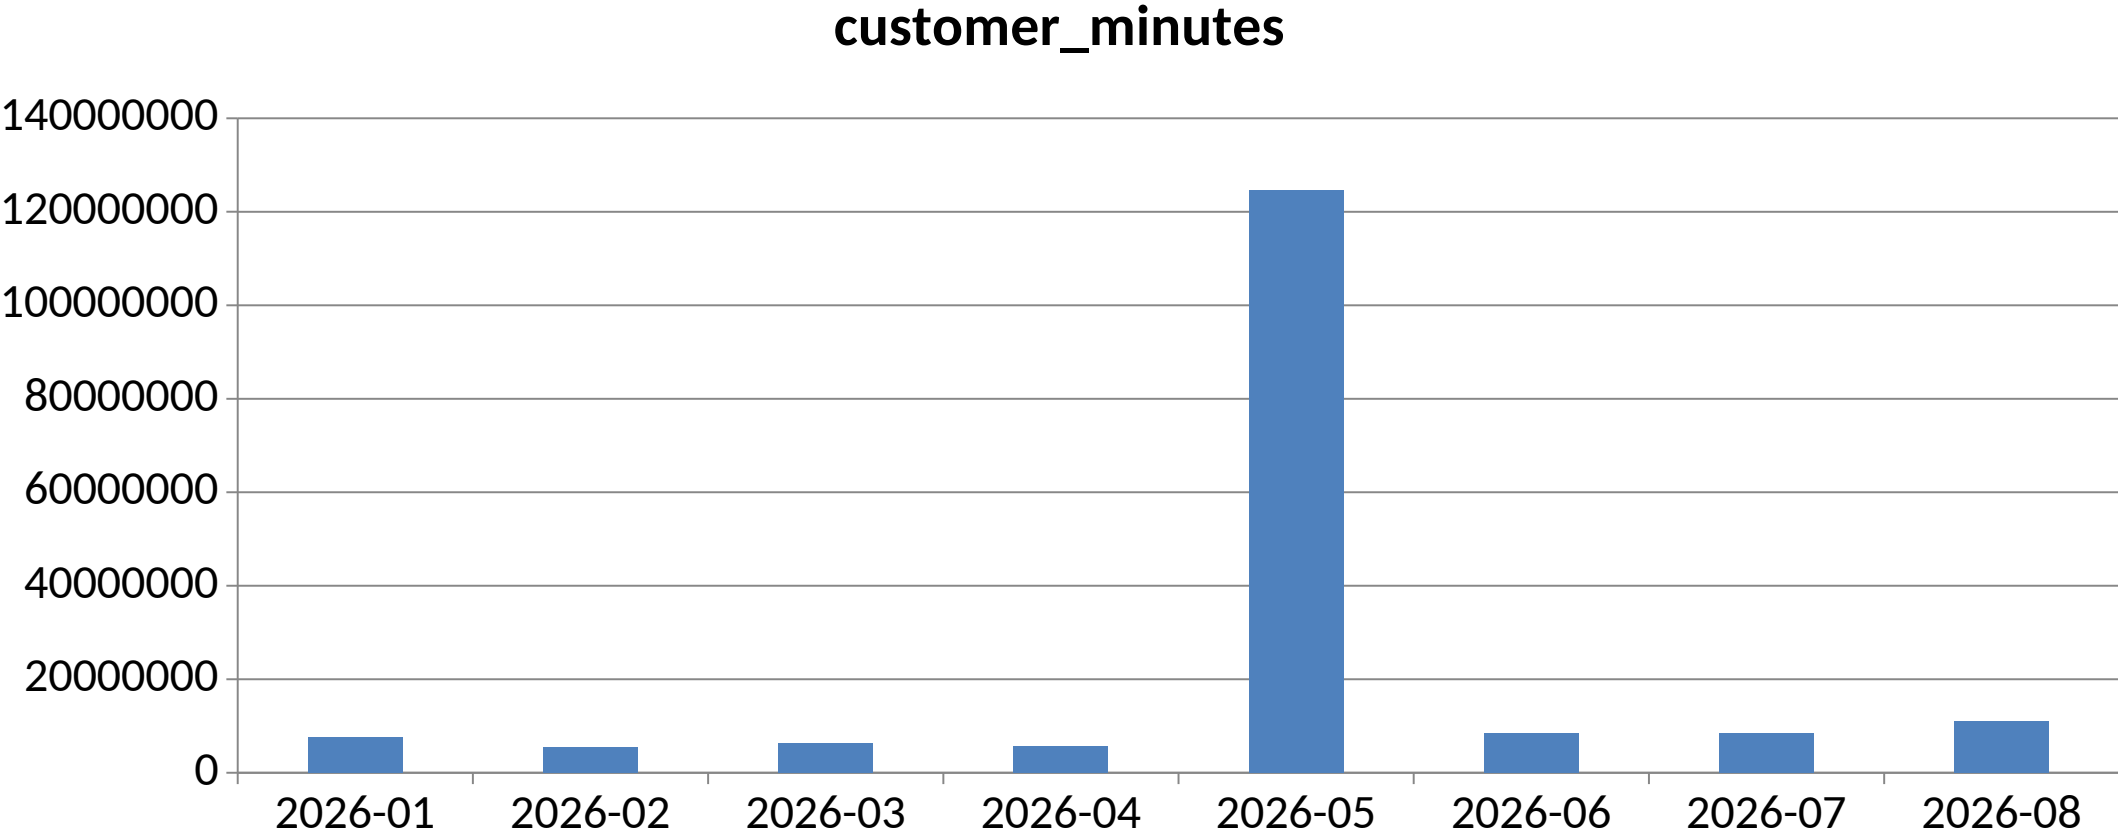

Bayou 88.5 / 0.896

Prairie 139.3 / 1.092

Customer minutes by month

All sustained interruptions in the 2026 extract, all classes. May is dominated by the wind event (463 interruptions, 132,152 customers, 116.6 million customer minutes).

2025 worst-feeder list recap

32 feeders: top 22 by SAIDI and top 22 by SAIFI (5% each, with overlap). 18 feeders were more than 200% above the feeder average in 2025. We screen against both the 300% rule text and the 200% statutory threshold.

Repeat worst feeders in 2026

3 feeders on the 2025 list are again among the 22 highest-SAIDI feeders for January-August 2026 (excluding the May event):

BY-S29-05

PR-S02-02

PR-S03-04

Remediation status

Each listed feeder gets a plan within 90 days: patrol and infrared scan, vegetation hot spots, fuse coordination, and reclosers or IGSD automation where needed. Prairie actions: owner shown as the Prairie district engineer in the tracker.

Automation coverage

At August 31: 162 feeders with reclosers only, 134 with none, 102 with IGSD loops and 38 with full automation.

Asks of the Council

Confirm IGSD automation for PR-S02-02 and PR-S03-04 in the 2027 plan.

Confirm the tracker owner for Prairie actions.
