

Customer Operations Overview

Sedgewater Energy Holdings | Customer and Market Operations | 2026-09-09 | v1.0

Overview of Sedgewater's customer operations - contact centers, REP service orders and metering - for the leadership team and the outside review. Prepared by the Senior Vice President, Customer and Market Operations, September 9, 2026.

How customer operations are organized

One contact center at the Houston operations center handles electric and gas contacts, with an overflow partner, Harborview Contact Solutions, for storms and billing peaks. Customers can also report outages by text, web and automated phone.

Electric customers buy electricity from one of 58 REPs, who bill them; Sedgewater handles outages, hazards and service orders. Each REP chooses how customer outage calls reach us: by transaction, by forwarding calls, or by giving customers our outage number. Gas customers are billed by Sedgewater directly.

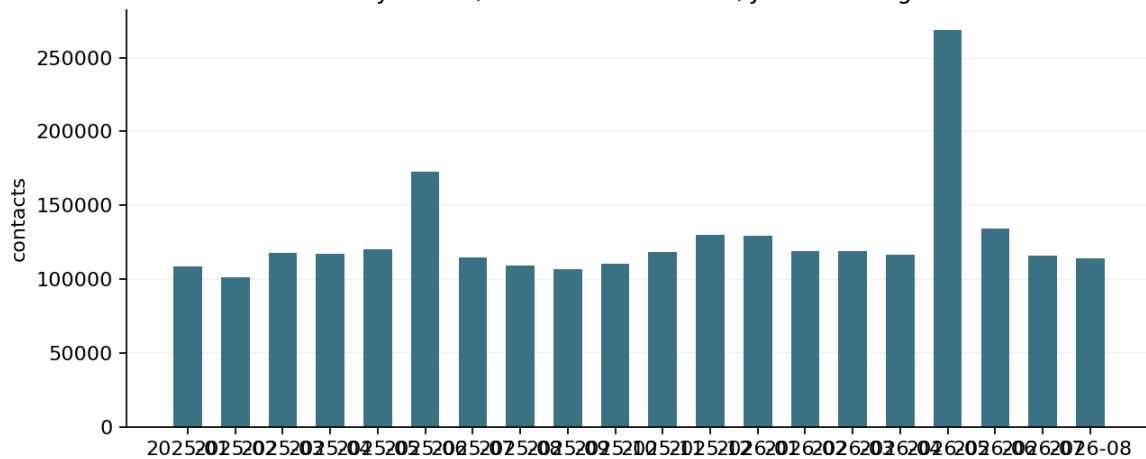

Service targets

Average speed of answer of 60 seconds or less in normal operations and under three minutes during storm activation; abandonment below 5%.

Contact volumes

In 2025 we received 586,919 electric and 841,105 gas contacts; average speed of answer was 62 seconds for electric and 54 seconds for gas, and 3.7% of queued calls were abandoned. From January to August 2026 we received 562,022 electric and 555,713 gas contacts, and 53% were completed in self-service channels. The chart shows contacts offered by month for both businesses.

Customer contacts by month, business and reason, Jan 2025-Aug 2026

Period	2025-01-01 to 2026-08-31

Monthly contacts offered, handled by agents, completed in self-service and abandoned, with handle and wait minutes, by business and reason, January 2025 to August 2026. Electric self-service was not counted for January and February 2025.

May 2026

Electric contacts reached 205,440 in May, against 49,645 in April. The overflow partner was activated on the evening of May 19 with 120 agents. Electric average speed of answer was 175 seconds for the month and reached 11 minutes 40 seconds on May 20; 12.1% of queued electric calls were abandoned. Contact capacity for the first 48 hours of a major event is the main customer lesson from the event.

REP service orders

REPs submit move-ins, move-outs, switches, disconnects and reconnects for non-payment, re-reads and investigations through the market transaction gateway; most are completed remotely through the meter network. In 2025 REPs submitted 1,179,882 orders, 98.7% of completed orders were on time and 91% were completed remotely. From January to August 2026 there were 804,281 orders and on-time completion was 98.3%, falling to 95.4% in May.

REP service orders by month and order type, January 2025 to August 2026: received, completed on time, completed late, completed unexecutable, rejected and completed remotely. Orders carried into the next month are not shown.

Metering

The current meter fleet was installed from 2011 to 2013, and vendor support for this generation ends in 2030. A 12,000-meter pilot of the next generation is under way in Crossroads District ahead of a fleet decision in 2027.

Data notes

In January 2026 the 'REP or service-order inquiry' contact reason was redefined to include REP calls about meter reads, so 2026 counts for that reason are not directly comparable with 2025.
