

Integrity linkage review workbook	
Mesa Lantern Energy LLC	
Effective date	2026-09-26
Purpose	A combined inspection, work-order, and asset-instance view for record-link checks.
Coverage	See each dataset dictionary and summary. Missing numeric values are excluded, not zero.
Summary interpretation	Descriptive statistics of selected records only. Totals of percentages and adjustment values are not operating KPIs.
Introduction	A combined inspection, work-order, and asset-instance view for record-link checks. This draft is prepared for district supervisors as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.
Purpose and immediate use	Use the asset register to verify that linked findings and work orders refer to the same equipment and location. Keep the inspection state distinct from work-order status. A link error should be listed for correction instead of manually relabeling either record.
Inspection-to-work path	Inspection Register holds scheduled and ad hoc checks of meters, tanks, compressors, and pads. An observation may open a linked work order, but the two records answer different questions: the inspection records what was seen and the work order records the response. Overdue observations stay open until a named owner verifies closure. A scheduled check without a finding need not create maintenance work.
Work-order route	A field request is tied to an asset and location. The integrity lead prioritizes it, and a supervisor confirms isolation and contractor readiness where needed. Completion is not inferred from a planned date: closeout requires a completion date, downtime record, and verifier. That sequence supports a distinction between an open request, work in progress, and a verified closed order.
Record linkage	Synthetic well, asset, location, vendor, work-order, and project keys connect the proposed datasets. Business users should see natural asset and project names where possible, while the keys preserve joins across extracts. A linked inspection and work order should refer to the same asset instance and location. A record without a valid link should be flagged for review rather than attached to the nearest plausible item.
Record question for review	Select a linked inspection and work order and confirm equipment instance and pad in both tabs. If either differs, record a join exception. Do not correct the mismatch by changing the displayed name in the combined workbook.
Review action and handoff	The workbook supplies data tabs and dictionaries; it does not claim that every observation needs maintenance or that a closed order automatically closes an observation.

Dataset	Measure	Unit	Total	Mean	Records	Period start	Period end
Field Inspections	Row count	records				2026-01-01	2026-08-31
Maintenance Work Orders	downtime_hours	hours				950 2026-01-01	2026-08-31
Asset Register	Row count	records	158,229.36	121.53	1302	2026-08-31	2026-08-31
