

Maintenance work-order register

Mesa Lantern Energy LLC

|                            |                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Effective date             | 2026-09-26                                                                                                                                                                                                                                                                                                                                                                                       |
| Purpose                    | Selected asset work orders with priority, state, dates, and verified downtime.                                                                                                                                                                                                                                                                                                                   |
| Coverage                   | See each dataset dictionary and summary. Missing numeric values are excluded, not zero.                                                                                                                                                                                                                                                                                                          |
| Summary interpretation     | Descriptive statistics of selected records only. Totals of percentages and adjustment values are not operating KPIs.                                                                                                                                                                                                                                                                             |
| Introduction               | Selected asset work orders with priority, state, dates, and verified downtime. This draft is prepared for district planners as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.                                                                       |
| Purpose and immediate use  | Filter the data by asset instance, location, status, and due date. Closed date and downtime can be blank for legitimate reasons. A work order still in progress should not be treated as complete because its planned due date has passed.                                                                                                                                                       |
| Work-order route           | A field request is tied to an asset and location. The integrity lead prioritizes it, and a supervisor confirms isolation and contractor readiness where needed. Completion is not inferred from a planned date: closeout requires a completion date, downtime record, and verifier. That sequence supports a distinction between an open request, work in progress, and a verified closed order. |
| Maintenance measures       | Backlog is the count of open work orders at period end. An overdue order has a due date before that point and is not cancelled. Verified downtime hours are summed only where recorded; a blank duration is unknown rather than zero. Those definitions prevent an early extract from making the outstanding workload or the cost of disruption look smaller than the underlying records allow.  |
| Record question for review | Filter an asset instance with more than one order. A new request can be open while an older request is closed, and their downtime fields may differ. A one-row-per-asset assumption would lose that sequence and misstate backlog.                                                                                                                                                               |
| Review action and handoff  | The summary tab totals recorded numeric values; use the stated backlog and overdue definitions for period-end measures. An open queue needs a period-end state, not merely a count of rows.                                                                                                                                                                                                      |

| Dataset                 | Measure        | Unit  | Total | Mean       | Records | Period start | Period end |
|-------------------------|----------------|-------|-------|------------|---------|--------------|------------|
| Maintenance Work Orders | downtime_hours | hours |       |            |         | 2026-01-01   | 2026-08-31 |
|                         |                |       |       | 158,229.36 | 121.53  | 1302         |            |

| Dataset                 | Field           | Definition                         | Unit | Type       | Reference |
|-------------------------|-----------------|------------------------------------|------|------------|-----------|
