

Production measurement and stream dictionary

Mesa Lantern Energy LLC | Production Accounting | 2026-09-26 | v0.1-draft

This dictionary sets out the meanings of oil, raw gas, and the internal boe view used in the selected production extract. This draft is prepared for data users as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.

Purpose and immediate use

Oil includes lease condensate and is stated in stock tank barrels. Raw gas is recorded in Mcf at the modeled measurement point. The six-to-one boe conversion is arithmetic for an internal summary and is not a statement about prices or energy equivalence. Processed NGL volumes are outside this well-level data. Each row identifies a well, pad, date, status, and meter reference.

Production stream definitions

The modeled field ledger holds oil, including lease condensate, in stock tank barrels and raw gas in thousand cubic feet at its measurement point. The internal barrel-of-oil-equivalent view uses six Mcf of gas for one boe. That ratio is a reporting conversion only; it does not make gas and oil economically or energetically identical. Processed natural gas liquids are not attributed to individual wells in this extract.

Production measure

For a reviewed well-day, internal boe is oil barrels plus raw gas Mcf divided by six. A month total sums the included reviewed daily records; an average daily rate divides by calendar days and must be paired with a coverage indicator. Because this pilot extract samples well-days, neither its total nor its average can be presented as Mesa Lantern's full operated production without an explicit coverage method.

Coverage and missing values

The proposed extracts end on August 31, 2026. Production rows represent selected well-days, about 32 of 118 modeled wells per day on average, so their sums are not companywide production totals. Some meter or downtime values may be null, with a reason where available. A missing value is excluded from a numeric calculation and must never be silently treated as zero.

Record linkage

Synthetic well, asset, location, vendor, work-order, and project keys connect the proposed datasets. Business users should see natural asset and project names where possible, while the keys preserve joins across extracts. A linked inspection and work order should refer to the same asset instance and location. A record without a valid link should be flagged for review rather than attached to the nearest plausible item.

System roles and handoffs

Field Log and Meter Historian feed the reviewed Production Ledger. Inspection Register and Work Register exchange references when a finding leads to maintenance. Vendor Ledger carries contractor transactions. Reporting Mart receives read-only exports for monthly summaries; it does not write changes back to operational systems. Source entries and timestamped revisions remain in those systems, which is why a report should name its extraction date.

Record question for review

If a report labels a column simply 'liquids,' return to the producing stream and measurement point before using it. Oil including lease condensate and processed NGLs are different categories here. The dictionary is the place to settle the unit and inclusion rule, not a chart caption.

Review action and handoff

A table derived from the selected extract describes only those records. Present the date span and the number of contributing well-days beside any sum or average. Data status and nulls should remain visible so readers can distinguish accepted, estimated, and under-review entries.

Companion extract summary

The accompanying summary is calculated from the selected records in this extract. Read its period, contributing-record count, and units before comparing values. It does not substitute for the record-level definitions and coverage limitations described above.

Measure	Value
Measure	oil_bbl
Unit	bbl
Total	1897172.35
Mean	251.148
Records	7554
Period	2026-01-01 to 2026-08-31
Measure	raw_gas_mcf
Unit	Mcf

Total	11407916.6
Mean	1506.9903
Records	7570
Period	2026-01-01 to 2026-08-31

Selected reviewed well-days, about 32 of 118 modeled wells per day on average; incomplete population coverage. Oil and raw gas only, no processed NGL attribution.
