

Issued site-readiness record standard

Mesa Lantern Energy LLC | Field Operations | 2026-09-26

This standard describes the modeled records required before a contractor mobilization is released to site. This draft is prepared for field supervisors as part of Mesa Lantern Energy's initial information handoff. It describes the modeled operation at the stated date and should be read with the period and coverage of its supporting records.

Purpose and immediate use

The field supervisor records the job safety analysis reference and a readiness confirmation for the planned work. The vendor, scope, location, and dates come from Supply and Contracts. A work order provides the asset and requested task when the mobilization responds to maintenance. The release record establishes that a documented check occurred; it does not by itself demonstrate that service was later completed.

Contractor and invoice path

Supply and Contracts records approved vendors, scope, location, mobilization dates, and invoice references. Before a mobilization is released, the field supervisor records a job safety analysis reference and readiness confirmation. After service, the supervisor confirms work performed; Supply and Contracts then matches the invoice. This modeled path keeps site release, service evidence, and payment review as separate decisions.

Work-order route

A field request is tied to an asset and location. The integrity lead prioritizes it, and a supervisor confirms isolation and contractor readiness where needed. Completion is not inferred from a planned date: closeout requires a completion date, downtime record, and verifier. That sequence supports a distinction between an open request, work in progress, and a verified closed order.

Decision owners

Field Operations is led by Avery Collins. Robin Vega is accountable for production accounting, Morgan Hale for asset integrity, Taylor Kim for development projects, and Casey Nolan for supply and contractor records. These assignments identify who can explain a record or approve a correction. They do not imply that one person performs every underlying field task or that another team may change a source record without its owner.

System roles and handoffs

Field Log and Meter Historian feed the reviewed Production Ledger. Inspection Register and Work Register exchange references when a finding leads to maintenance. Vendor Ledger carries contractor transactions. Reporting Mart receives read-only exports for monthly summaries; it does not write changes back to operational systems. Source entries and timestamped revisions remain in those systems, which is why a report should name its extraction date.

Record question for review

A released contractor visit should have a scope and site as well as a recorded readiness check. If the visit is only proposed, the standard does not permit a reader to infer that personnel entered the location. The later service confirmation is another record with its own purpose.

Review action and handoff

After the work period, separate field confirmation from invoice matching. If the scope or dates change, update the mobilization and retain the earlier information. This preserves a usable history for questions about who authorized site entry and what work the invoice covered.
